

Weather Message

Weather Alerting Software For Your Network

Weather Message is a comprehensive weather alerting software package. It features:

- Text message alerting for all computers on your network.
- Text message alerting for PDA's (personal digital assistant).
- Visual alerting for all United States counties and possessions.
- E-mail and Pager alerts with full text or a short message.
- Faxing full text messages.
- Selectively print incoming messages.
- View and animate graphic products.
- Archive messages for use by other programs.
- Ftp weather text and graphics to a website.
- Directly ingests the EMWIN data stream.
- Optionally ingests the NWS Weather Wire and NOAAPort data streams.
- Satellite failure switchover to the Internet Byte Blaster network.
- Executes from your system tray.
- Schedule user defined weather messages.
- Control external devices using the X10 protocol.
- Designed for emergency communication dispatch centers.

Version 2.x is supported on Microsoft Windows 95, 98, ME, NT, 2000, 2003 and XP. Version 3.0 is support on Microsoft Windows 2000, 2003, XP and Vista. PDA Client supported on Microsoft Windows CE, Pocket PC and Windows Mobile.

Weather Message Server is licensed for use on one computer. The Message Client and Map Clients are licensed for use on any number of computers, up to the capacity of the Server. The Server currently supports up to 50, 100, and 250 connections. This allows you to run Message Client and Message map on 25 to 250 computers.

Weather Message for 50 connections costs \$45.00. This includes the Server, Message Client, Message Map and support programs. The 100 connection version costs \$64.00. Additional 50 user licenses are \$19.00 per site.

In addition to Weather Message, we offer solutions for EMWIN retransmission. WxReTran can be used for VHF/UHF retransmission, while WxBBSrvr supports the byte blaster protocol for Internet or private networks.
